#### Big Game caught in the Lights!

Oct 14, 2011

Look at these two pics taken in the Kgalagadi Park using a Blitz 240 to illuminate them! The lions were about 70-80 meters away and the Blitz 240 was used plus a flash. The leopard was over 120 meters away and just the Blitz 240 was used to illuminate the cat as the flash would never reach that far!

These pics are a great example of the superior Lightforce beam and we thank Mario for sending them in. You can have a read of more of their adventures by going to <http://www.kruger-2-kalahari.com/>
